

History in Internet Explorer

Janet Benincosa, TI Specialist

Internet Explorer automatically records Web pages you've visited. It organizes them in folders on the History bar by the day you visited. Within each day, it organizes the Web sites alphabetically in folders, putting each page visited on that site in that folder.

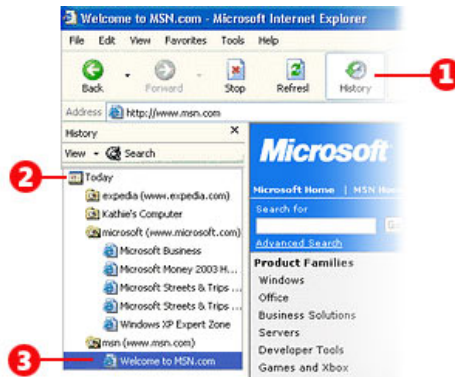

To find pages in the History list:

On the Internet Explorer toolbar, click the History button on the left of the screen.

In the History bar, click the time period you want to search.

Click the Web site folder to open the list of pages, and then click the link to the page to display the Web page itself.

When you've finished using the **History** bar, click the **Close** button.

You can delete any Web site or page from the History list. Right-click a Web site folder or Web page, and click **Delete**.

By default, Internet Explorer records every Web page you visit for 20 days. You may Change the Number of Days that Internet Explorer Tracks Pages You've Visited.

To Change the Number of Days that Visited Pages Are Tracked

1. In Internet Explorer, on the **Tools** menu, click **Internet Options**.
2. On the **General** tab, under **History**, change the number of days that the History list keeps track of your pages, and click **OK**.
